Zip Wire 1-Way (20m)

The 20m one way zip wire is an exciting way for children to test their limits and create personal challenges for children to overcome. This creates a stimulating environment allowing children to feel weightless and learn about the effects of gravity. The zip wires are extremely beneficial for improving fine motor skills such as tightness of grip and aids the development of core body strength allowing children to support and hold themselves freely during movement. Children enjoy helping each other to move faster by pushing each other developing coordination and strength skills. They can also see the importance of cooperation and friendships, by taking turns and learning how to share.
